

Rainbow Crystal Soil Instructions

Simply add 1 of our 10g bags of Rainbow Crystal Soil to Approx 2 quarts of Water and leave to soak overnight, we suggest 1 x 10g bag which is about a tablespoon full of crystals will give you approx 1 1/2 Quarts of Water Marbles.

After about 6—8hrs the Water Marbles will have fully absorbed nearly 200 times there weight in water, they will swell to about 3/4" in diameter, if you want them smaller simply take them out after about 4-6 hrs. Distilled Water is the best but usually tap water is fine as long as there is not a high Chlorine content.

CHOKING HAZARD -- Small parts. Not for children under 3 yrs.

Rainbow Crystal Soil

Instructions

Once Hydrated you have a few options for use.

Mix Rainbow Crystal Soil with Regular Soil

Mix it with the soil in House Plants or in the soil in your garden it will act as a reservoir to feed the plants, you can put it on top of the soil for outdoor potted plants, Even if you want to squish the water marbles down into granules it will still work, when it rains or when you water they will absorb the water again.

Dig a hole near or under your plants in the garden and fill with hydrated rainbow crystal soil again this will act as a reservoir , when the rain comes the soil will swell holding the moisture for the plants for dry days, the roots will Grow toward the Rainbow Crystal Soil and take the moisture they need.

Use as a Decorative Medium

This product looks pretty cool just on its own in a clear vase but you can create some really cool effects by mixing the colors together in the same container and because they are color fast and will not run you can do some really cool effects like stripes for football colors, Wedding Colors ? Themes, Centerpieces, insert candles or tea light candles and you have a real nice looking Center Piece for any table.

Rainbow Crystal Soil Instructions

Rainbow Crystal Soil as a Soil Replacement

Take existing plant and soak soil in water overnight - this will soften the soil and make it easier to wash and remove the soil from around roots, you want to get as much of the soil off as possible. Remove any dead or rotten roots and leaves from the Plant. Place the cleaned plant into an empty container gently spreading the roots apart, scoop the hydrated crystal soil Water Marbles around the plants roots until the container is full.

Add water and liquid nutrients as required by plant, you can even add some to the water when you soak the crystals, they will absorb it and slowly release it with the water feeding the plants, choose a clear fertilizer for this method or a dark colored Rainbow Crystal Soil so it does not discolor it.

Rainbow Crystal Soil Instructions

Occasionally spray the plant and soil with water to feed the plant and keep the Crystal Soil hydrated. If Crystal Soil shrinks you can fill the vase or container to the top with water and soak overnight. Carefully drain off the excess water the next day and the Rainbow Crystal Soil will expand again. They can be re hydrated like this over and over again and will last from 12 months to 2 years.

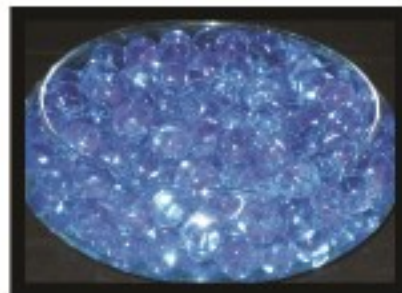

For Very Thirsty Plants Like Bamboo or Fresh Flowers Simply fill vase with Hydrated Rainbow Crystal Soil then add Water half way up to ensure roots are always in water.

Rainbow Crystal Soil Instructions

Use as a Room Freshener

How cool is this instead of soaking in water - soak in Pot Pour oil overnight - they will not expand quite as big as when soaked in water due to the moisture content of oil but they will still expand about 50 times etc. Now put them in a glass container and you have a room freshener or centerpiece that matches your plants, they will slowly release the oil into the atmosphere making your room smell fantastic, when they shrink simply soak them again overnight and you can re-use them like this over and over again, obviously you don't use the oil soaked ones with any plants, but its a great idea with any you have left over.

Growing Seedlings in Rainbow Crystal Soil

And yes you can grow seedlings - we are growing these vegetables in our warehouse right now.
